Cleaning Program
Liquid desinfection
NOTE: Before the clean process can be started, the pump or the blower has to run for at least one minute.
Pressing the cleaning-key starts the injection of the desinfection liquid into the whirlpool pipe. The pumpe will start for arround half a minute to mix the water with the liquid. Now it will work in the system for arround 15 minutes.
In the next step the pump will be turned on again.
After this the system will stopp again for 15 Minutes.

In the next step the pump will work for 20 seconds.

After this, the tub can be drained.
It the sensor detect no more water, the blower will start to dry the air system.
.
Fresh-water flush system (otional)
The system is washed out with the water flush automatically, when the tub is drained.
